

Coolimat-2000

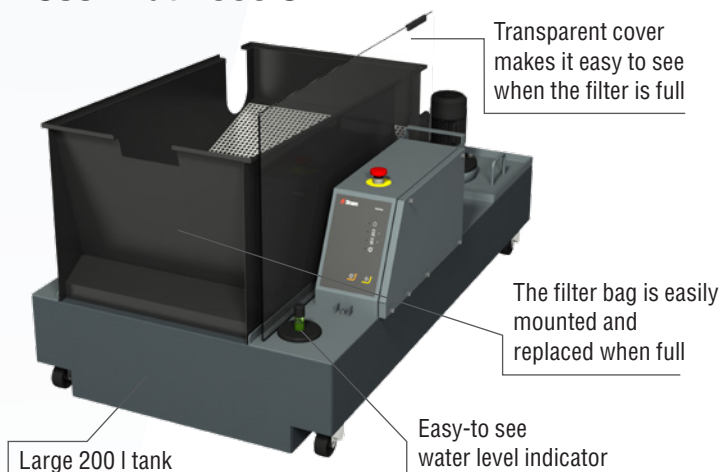

No time to waste

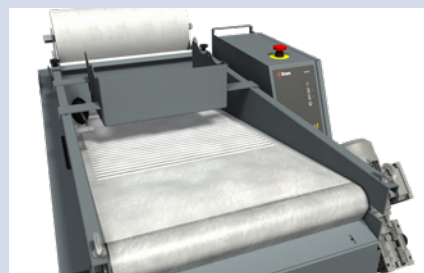

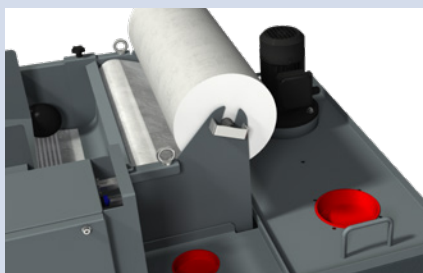

Coolimat-2000 filtration and cooling unit is available in two models:

The Band Filter for medium to high volume and the Static Filter for low to medium volume. It applies to both models that you achieve flexible installation on both the right and left side of the cut-off machine, a disposable paper filter that makes cleanup fast, a large 200 l tank, a slot that prevents overflow from the tank, an easy-to see water level indicator, and a start and stop function that is controlled from the cut-off machine.

Coolimat-2000 SF

24-7 filtration and recirculation of cooling fluid

Waste from sectioning is not to be taken lightly, and yet, one of the most common reasons for costly downtime during materialographic sectioning is the clogging of a filtration unit that isn't suited for the job. Therefore, we have created Coolimat-2000, a filtration and cooling unit with higher capacity than any of our previous cooling units. So, you can rest assured that cooling and cutting waste disposal is up and running 24-7. For those of you who have no time to waste

The Coolimat-2000 Band Filter and Static Filter are both designed to withstand tough conditions, have easy access for filter inspection, cleaning, and service, and are easily connected to the cut-off machine. The tank, filtration, and pump are always included.

Let our global experience be your advantage

Let us show you ways that have proven to be the best in the world.

When you choose products from Struers, you also choose some of the top specialists in the world, whose work is based on more than 140 years of experience in the materialography niche. Our support always includes:

- Access to our global support hotline
- Specialist counseling on how to optimize your individual processes
- All critical spare parts available for immediate shipping
- Annual service review
- Online manuals
